

STORAGE

Liquip has a growing range of products that address the needs of operators of storage tanks. From floating suction devices that ensure the release of clean product to overfill, level detection and loading systems we can modify and develop any of our range of products to suit your particular application.

STORAGE TANK MONITORS

Liquip gantry monitors are ideal for storage tank overfill protection monitoring.

The PPM3XX and MPP102 monitors are also suitable for storage tank monitoring.

Powered by 11-30 VDC, both are ideal for monitoring interstitial space for leakage in double walled non-bunded smaller tanks or for overfill protection.

They operate with optic sensors and feature all the other major requisites of any optical sensing system (fail safe, I.S. outputs, <0.5 sec shutdown etc).
